

WINTERIZING YOUR MODEL “A”

- Oil:** Change engine oil, record date or mileage _____
- Coolant:** check anti-freeze, or drain radiator. Use ethylene glycol, non-toxic propylene glycol, or for storage can use plumbing anti- freeze, don't leave engine empty.
- Fuel:** fill tank (non ethanol) and run carb. dry, add fuel stabilizer before filling tank. Drain carb and sediment bowl.
- Battery:** disconnect leads, clean posts and connectors; connect to battery maintainer type trickle charger. Coat connections with protective film such as petroleum jelly.
- Tires:** inflate (35#), and put car on jack stands.
- Grease:** grease all fittings so you're ready for Spring
- Clean:** Wash and wax before storing. Coat undercarriage with Fluid Film or equivalent.
- Moisture:** Use desiccant or heat source in cab if stored in non heated building. “Stor-Dry” warm air circulators available in marine and RV supply stores work well.
- Cover :** use proper car cover and leave windows cracked open to prevent mould or mildew.
- Rodent protection:** Bounce dryer sheets, moth balls, Irish Spring soap bars have been known to work. Plug exhaust pipe with steel wool to prevent mice from getting into engine.

Keep a record of what has been done and hang on steering wheel.
